

Stay up-to-date!

Compass provides current company information in real time.

COMPASS REALTIME
COMPANY INFORMATION IN REAL TIME

Reliable information about your business partners

Correct and current information about customers and suppliers ranks among the most valuable data within your company and will bring you a tremendous competitive advantage. Compass Realtime keeps all information up-to-date automatically, directly in your systems. This way, you can fully focus on your core business!

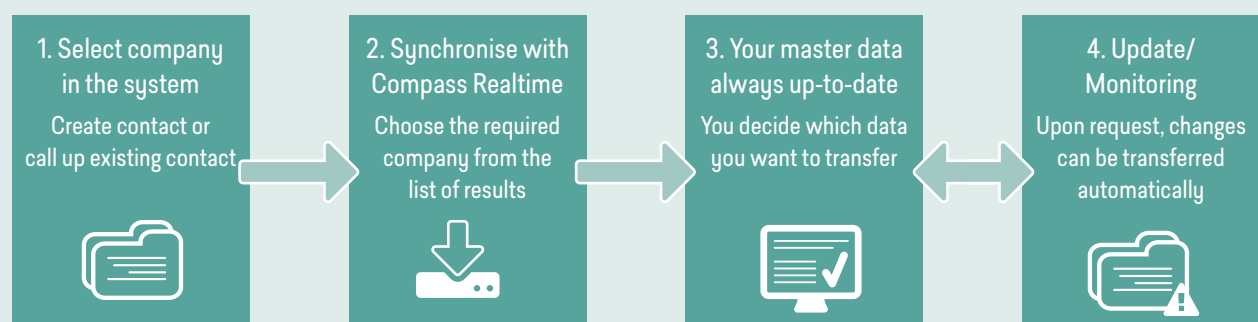

Up-to-date: 1,000 changes per day

You have an appealing offer, an important order, outstanding accounts? Incorrect or outdated information may lead to the loss of valuable customer contacts, time and, as a consequence, hard cash. Compass Realtime shows all changes effected at customer or supplier side in real time. Furthermore, it gives access to current information provided by the Business Compass, a tool that adds important details to all official company data obtained from the Austrian Business Register, while keeping this information up-to-date continuously. Thus, some 1000 changes are implemented every day.

Efficient: direct connection to ERP/CRM

Compass Realtime is available wherever you need it: from creating new contacts through to accessing detailed information on existing contacts and monitoring of changes. All master data are synchronised and any missing information is added, if required. Compass Realtime allows direct connection to all ERP or CRM systems – whether provided by Austrian suppliers such as BMD or international manufacturers, e.g. Microsoft or SAP. In addition, a standardised XML interface is available to connect to any other system.

Keep your data up-to-date in a few simple steps:

Automatic: monitoring of changes

The integrated monitoring service continuously informs you about updates in the Compass database. This ensures that you have up-to-date information at all times – with one click you can decide which data you want to transfer to your system.

Transparent: Compass Benchmark

By means of a grading system, probability of default and sector comparison, you gain in-depth insights into the business and learn more about your business partners. The Benchmark Report provides detailed information.

Relevant: newly established companies, insolvencies

It is possible to retrieve information online both about companies newly registered with the Business Register as well as entries into the edict database of the Republic of Austria (company insolvencies and private bankruptcies) including daily updates on the insolvency proceedings.

Thorough: current knowledge base

Up-to-date in-depth information about more than 460,000 companies, private foundations and 540,000 traders; 900,000 registered individuals and heads of divisions, including current and historical information about their functions.
